

TO WHOM IT MAY CONCERN

Release: February 2026
Revision: 1
Subject: Biodegradability / **Aquavate™ Bio SB 2383**

STATEMENT

Aquavate™ products are (stabilized) dispersions of polymeric materials in water. Depending on the product grade, additives might have been added to the formulation to improve product performance, increase stability/shelf-life and/or add new product functionality.

The biodegradability status of the solid components in the product **Aquavate™ Bio SB 2383** (~45% total solid content in water) are listed below:

Component	Concentration	Biodegradability status
Biodegradable polymer	~35-40%	OK Biodegradable Soil and Marine OK Compostable Home and Industrial (EN13432)
Remaining Solids	~5%	Inherently biodegradable

The product also contains some biocides to prevent product degradation. See Regulatory Information Sheet (RIS) for actual dosage levels.

This statement has been drawn up based on the information provided to us by our raw material suppliers and serves for informational purposes only. It is the final responsibility of our customers to determine that their use of our product(s) is safe, lawful and technically suitable in their intended application.
